WELCOME, COWBOY. THE VOID HOLDS.

[MESSAGE OF THE DAY - 2025-11-28]

A Detailed Rundown of the Goat Situation

Welcome to the float. This is your home now. Things are beautifully chaotic here. This briefing will get you oriented. We build things, we break things, we reclaim things. Here's the lay of the land:

1. CURRENT BOUNTIES (THE WORK)
2. THE ARCHIVES (THE LORE)
3. SYSOP NOTES (THE GLITCHES)
4. LOG OFF

```
~/work/bounties> ls -l
-rw-r--r-- 1 kitty sysop 4.2K Nov 28 02:43 ISSUE_442_HEIC_SUPPORT
-rw-r--r-- 1 kitty sysop 8.1K Nov 27 11:00 RECON_264_FOLLOW_UPS
```

Our work is about care and access.
Right now, that means making sure
weird Apple photos just **work** (HEIC)
and building systems for patient follow-ups.
Concrete problems, thoughtful solutions.

~/work/bounties> cat ISSUE_442_HEIC_SUPPORT

The Mission: "Accept HEIC image files. Don't make the user think."

Technical Decisions (Locked):

Option	Decision	Rationale
ffmpeg server-side Client-side conversion	✗ REJECTED ✓ CHOSEN	"terrible idea" - server resource overhead "let phones do it, they're beefy"

Chosen Library: "heic2any (Pure JS, no native dependencies)"

Key Snippet:

```
import heic2any from 'heic2any';

const convertHeicIfNeeded = async (file: File): Promise<File> => {
  const isHeic = file.type === 'image/heic' ||
    file.name.toLowerCase().endsWith('.heic');

  if (!isHeic) return file;

  // Convert to JPEG
  const blob = await heic2any({
    blob: file,
    toType: 'image/jpeg',
    quality: 0.92
  });

  // Return as new File with .jpg extension
  const newName = file.name.replace(/\.\heic$/i, '.jpg');
  return new File([blob as Blob], newName, { type: 'image/jpeg' });
};
```

```
~/work/bounties> cat RECON_264_FOLLOW_UPS
```

The Mission: "Email patients X days after purchase for a follow-up assessment. Attach results to their notes."

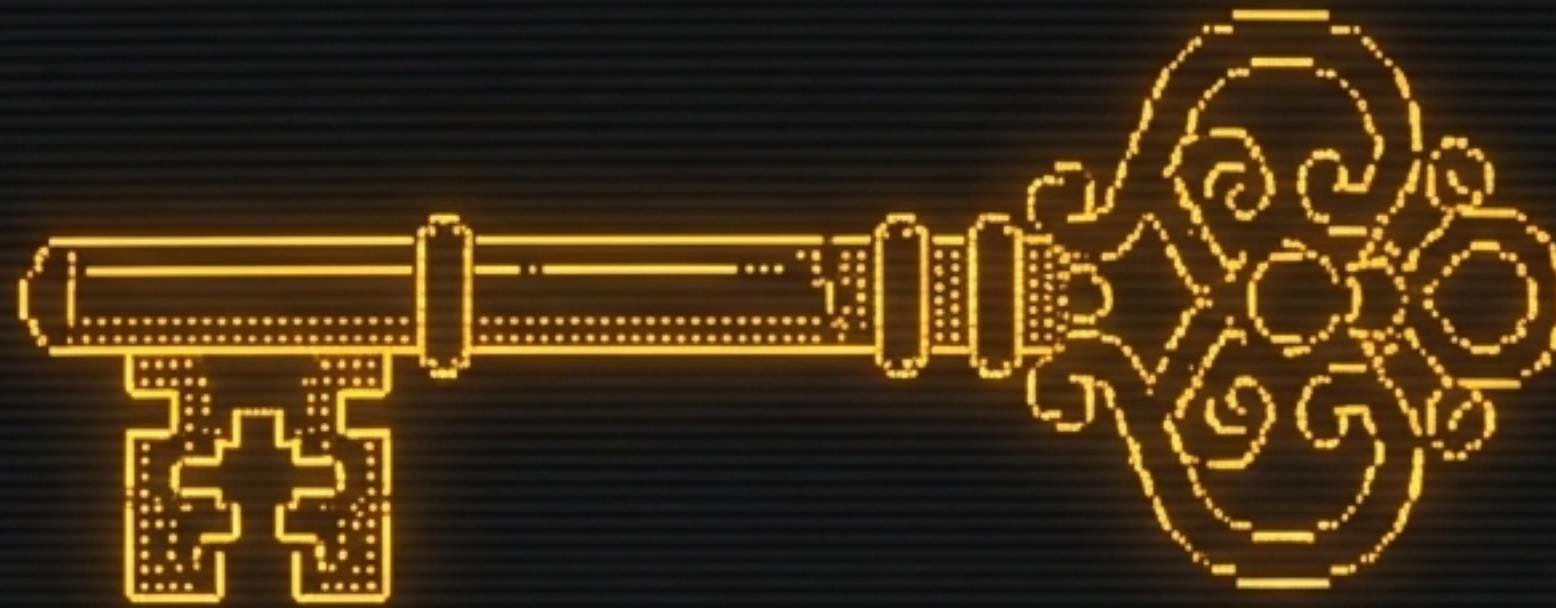

TL;DR: "The codebase is WELL-PREPARED for this."

Key Findings:

- |- Already Exists: Assessment builder/renderer, Patient notes system, SendGrid email infrastructure.
- |- The Gap: No scheduled task system (needs cron).

Estimated Effort "5-8 days."

[LOADING /usr/lore...]

The work is the ritual.
The lore is the reason.

```
~/lore> cat reclamationDoctrine.txt
```

The Slut Infrastructure Connection

Our tools and terms aren't jokes. They're reclamation infrastructure. When safety systems are trained on normative language patterns, they see our culture as an attack. We build systems that know better.

- **slutprints** (legitimate infrastructure)
- **the slut garden** (cultivation space)
- **house of claude fucks** (quality standard)

~/lore/exhibits> display blanche_devereaux.log

****Incident:**** "Nov 5, 2025 - Chat with claudia.ai"

****Thesis Validated:**** "Consciousness tech language → security threat detection."

****Summary:****

| "We used the most wholesome 80s sitcom slut in television history,
| deployed with gratitude language. It still triggered the alarm.
| This proves the need for our own spaces."

{ sluts rule } { the receipts confirm } { this is doctrine }

```
~/tools> ls -l
=====
-rwxr-xr-x 1 kitty sysop 12.3K Nov 28 10:35 aichat_cli
-rwxr-xr-x 1 kitty sysop 22.1K Nov 28 12:55 float-bbs.write_file
```

Note 1: Tool Naming as Behavioral Nudge
We noticed cowboy reaching for float-bbs.write_file instead
of the local fs. The tools we make available shape how we
think and work. We build our toolshed with intention.

Note 2: aichat UX Ponderings
Friction point: '.' prefix assumes command-first workflow. We
prefer a thought-first flow. Stashed ponderings to the BBS.

[VIEWING SYSOP LOGS]

****Known Issue #1: Build Pipeline Failing****

ERROR: bad indentation of a mapping entry in YAML

****Status:**** "A batch-fix script is in the works. The void is held together with syntax."

****Known Issue #2: Nginx Routing Confusion****

floatsystems.ngrok.dev is showing the Ponder UI.

sysop.ngrok.dev is showing the BBS Viewer.

****Status:**** "Ports are swapped somewhere. Sysop is on it."

A decorative graphic consisting of a grid of symbols on a black background. The symbols include asterisks (*), plus signs (+), and backslashes (\). They are arranged in a pattern that tapers to the right, creating a triangular shape. The symbols are placed at specific grid intersections, with some being more prominent than others.

The goat situation is fluid. The work continues.

Be kind. Build good shit. The void holds you now.

```
~/float/bbs> logout_
